

# ***NSGDatacom***

## **Building to Building T1 Voice, FAX, and Data**

***The Problem:*** T1s for inter-building connectivity are expensive prone to delivery delays.

***The Solution:*** NSGDatacom 2205D installs in an afternoon and reduces OPEX

**With one cellular broadband pipe you can reduce inter-building T1 Operating Expense – OPEX, and improve time to market.**

**The NSGDatacom 2200 series provides voice, FAX data, video, etc. to locations that have traditionally been land locked to single purpose copper lines. Toll quality transport of up to 24 simultaneous voice calls over a single Cellular data pipe, with room for data or video, and reliable Group 3 FAX delivery. Can connect to either the PSTN via certified partners or can be used to provide off premise extensions from a PBX or Key system.**

**NSGDatacom's proprietary compression scheme transports 40,000 telecom call minutes in 4.8 GB of cellular bandwidth without the delay or restrictions of a copper LEC install.**

*Compatible with the Cellular technology of your choice
