

NSGDatacom

One Cellular Broadband Pipe For Voice, FAX, Data, Video

With one cellular broadband pipe you can reduce Operating Expense – OPEX.

Provide voice, FAX, data, video, etc. to locations that have traditionally been land locked to single purpose copper lines. NSGDatacom cellular solutions provide toll quality transport of 1 – 24 simultaneous voice calls over a single Cellular data pipe, with room for data, video, and reliable Group 3 FAX delivery. End users can connect to either the PSTN via certified partners or can be used to provide off premise extensions from a PBX or Key system.

NSGDatacom's proprietary compression scheme transports 40,000 telecom call minutes in 4.8 GB of cellular bandwidth without the delay or restrictions of a copper LEC install and is compatible with 3G and 4G networks.
