

NSGDatacom

Ambulance Voice, FAX and Data

The Problem: Ambulances depend on Cellular Data to perform data down loads to monitoring centers. Some carriers are dropping circuit switched so ambulances will not be able transact these data sessions.

The Solution: NSGDatacom VoIPTurbo replaces the existing Circuit Switch Data devices and provides connectivity to telemedicine devices via cellular transport. The VoIPTurbo has standard industry connections providing standard interface points and transparent user experience.

The NSGDatacom VoIPZip provides the perfect solution for ambulance telemedicine end users who will lose their data connectivity due to the discontinuation of the Circuit Switched data.

The solution provides the necessary communications requirements for the ambulance telemedicine device to connect to the host system without Circuit Switched Data. Typical install times are in minutes and units can be moved from one location to another or left in place for years. Consider the solution:

- Requires one Cellular account.
- Installs in minutes via industry standard connections in a small unobtrusive footprint.
- Reduces Monthly operating costs.
- Provides a secure connection via 3G, 4G.
